If you want a really good package, I'd recommend a Hundred 16x Red Recolor @Kate and @Greninja. The best package is all opinion based Vymm Default packages are the best. I personally love Purpleds 1.14 edit but there are a bunch of other good ones like sammygreens packages. Sickfits Because you seem a little confused about how in find the link to download the package is below in the description. When you click it, it will transfer you to a mediafire where you will click the download button. The folder will appear on the download folder when the download is complete. Then you load your game to go to settings>resource packages and click Open Resource Pack Folder, and then you will move the package folder from the download to the resource package folder. You'll exit the settings so you'll let it refresh, then re-enter and you'll see it appear. You may be using 1.14, but that's still fine even if it says the back is inconcedist. Just click to install and you're all set up. Now, prefer to use the GGmen package luvonox but the Zyphsv1 package is really good Purpleds and Deos too. Below I have links to all the videos showing the packages below. I hope I helped you. Purple: GGmen: Zyph: TimeDeo: either just use the aphotic blue package the best package of personaly Epixon64 Or you could try rat v2, it's an ok package, it seems good for bedwars.
